Certificate on the non-use of toxic heavy metals

We confirm, that the sheetfed offset printing inks and varnishes supplied by Flint Group do not hold toxic heavy metals like lead, cadmium, mercury, chromium, hexavalent chromium, selenium, arsenic and antimony as constitutional formulation ingredients.

Additionally we confirm, that the summarized content of the four metals lead, cadmium, mercury, hexavalent chromium does not exceed 100ppm.

It is important to recognize that many substances are ubiquitous; the observance of all these substances at or below trace levels is not part of our ongoing production control. The information utilized in this evaluation has been collected from raw material suppliers via Flint Group's regulatory compliance program; no analytical testing has been conducted

With kind regards

Flint Group Germany GmbH

i.A. Rühle-Welter
